Navaneeth V

Technical Lead

Professional Summary

It's simple to write programs for machines. Writing for other developers to comprehend is a skill, though. Scalable apps are produced when the right web architecture and design patterns are followed. I work in a way that only a professional can accomplish.

I have a strong understanding of data structures, algorithms, object-oriented principles, design patterns, architectural patterns, relational database design, code debugging, query optimization, core web components, web security, and code version controls.

I'm proficient at delivering, scaling, and optimizing software products and services. I never compromise on the quality of my code. With cutting-edge technologies, software design patterns, and SOLID principles, I can create durable software.

I'm always learning new things because I find them fascinating. Keeping organized and easing people's daily challenges are two things I'm passionate about. My heart is filled with such genuine delight when I help someone else lift their burden; therefore, I constantly strive to do it better.
